

FOR IMMEDIATE RELEASE

AgriCharts and AgTrax Offer Real-Time Commodity Accounting Solutions to Agribusinesses

CHICAGO, IL and HUTCHINSON, KS – July 9, 2009 – AgriCharts, the agricultural division of Barchart.com, Inc., which provides market data, website hosting and technology solutions to agribusinesses, today announced an initiative with AgTrax Technologies, the leading provider of agricultural software in the Midwest. Through their newly formed relationship, grain elevators, co-ops and other agribusinesses which use AgTrax Technologies' Commodity Accounting software can receive automatic updates of real-time market data for commodity prices including corn, soybeans and wheat to perform price sensitive grain accounting. The real-time market data originates from AgriCharts and is seamlessly integrated into AgTrax Technologies' software.

With the availability of real-time market data agribusinesses will benefit from the ability to perform critical accounting functions using the latest commodity prices. This enhancement improves risk management performance, accuracy and overall efficiency for agribusinesses as the market data is automatically updated within the software. AgriCharts also provides automatic feeds of delayed and end-of-day market data as options.

"With the integration of live market data into AgTrax Technologies' Commodity Accounting software, agribusinesses can ensure they have the most recent prices available to perform critical real-time accounting and valuations," said Mark Haraburda, Managing Director at Barchart and AgriCharts. "With daily volatility in the marketplace, this is a feature all grain buyers need to have at their disposal," added Haraburda.

"With this new feature in our commodity accounting software, we allow our customers to integrate the markets, which have always been a factor, but the interaction was a manual process," said Jeff Jackson, President of AgTrax. "This is another accomplished goal that we set years ago and by partnering with an organization like AgriCharts we are able to integrate formerly external information into our application for the benefit of our customers."
